# HOW TO CREATE AN ANIMATED MAP IN POWERPOINT

WWW.BRAINYBETTY.COM
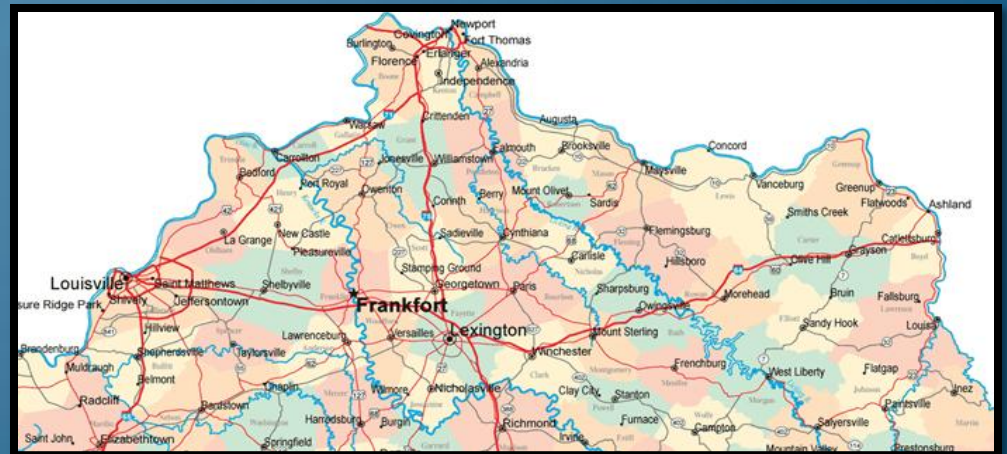

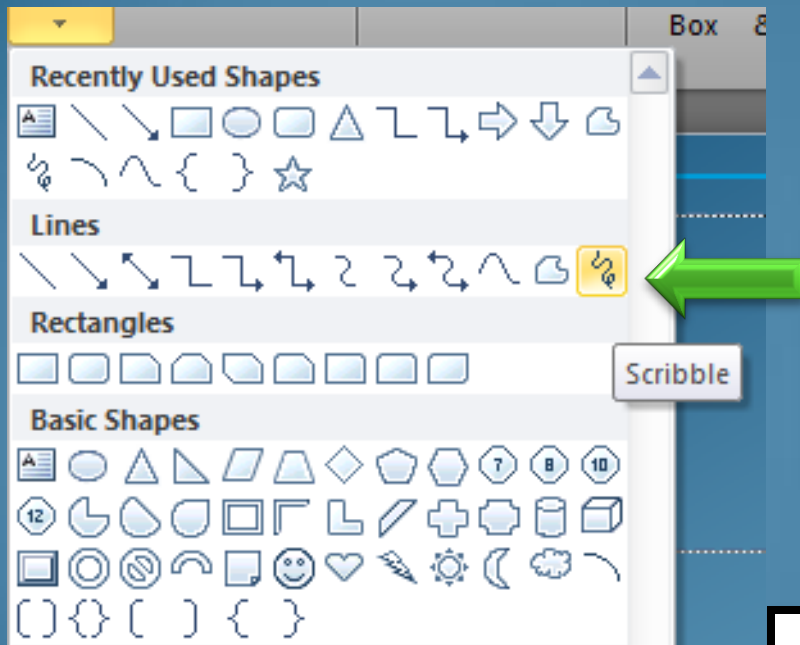

This is the result I want on the slide.

Start with an empty slide with the full map.

Crop to zoom to the area you want to show.

# Insert | Shape | Scribble Shape.

Draw a line from your origination to your destination. Increase the width of the line.

Add a circle shape at the origination point.

Using the Animations menu, highlight the Circle shape and choose Custom Path.

Carefully follow your drawn line to the destination and double-click.

Adjust the duration time if necessary from the Animation menu.

Have fun!
